Subject: Halcyan H2o 122, Positive Results

Hi Mike,

I'm putting together a kit for a jumbo and would like to know what the diameter is of the center section of the H2o 122 Halcyan? This is so I can buy the correct clamps.

We have proven success with the Halcyan units, a new rig onsite has prolonged hydraulic cooler life compared to existing rigs, and the coolers were lasting approximately 4 months whilst the new rig has been onsite longer than 6 months with no overheating issues.

We fit Halcyan it to all new machines;

- Jumbos - DD421
- Solos - DL421 & DL431

Plan to fit Halcyan to the following;

- Axera D07 240C and Axera 7 -260C.
- Also the Solo 7-15F we run at Telfer.

The water system doesn't change all that much between the models so it is only a matter of finding a good location to mount the Halcyan.

Cheers
