

Halcyan Water Conditioners

Halcyan can help reduce your company's carbon footprint, and save you money, in one easy step.

You and your clients use water, somewhere...and you want to:

- Reduce operating and maintenance costs, engineers downtime and spare parts.
- Improve equipment reliability and productivity.
- Protect the value of capital equipment.
- Reduce the carbon footprint and meet CO₂ targets.
- Reduce the use of chemicals and effluent production.

Say hello to the most sustainable, simple and powerful water conditioner on the market. It's chemical free and permanent, replacing water softeners, forever.*

Prevent future limescale.

Reduce existing scale.

Create softened water.

Thicker Limescale means Increasing Energy Consumption

Limanala Thialmana (m.

So why is this, **the premium solution** available on the market?

Chemical and Salt FREE = NO effluent.

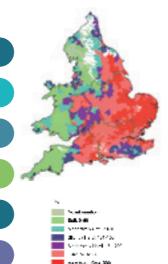

Permanent installation, with 10 year warranty.

NO moving parts = NO maintenance.

Minerals remain in their altered state for over 21 days.

WRAS approved - 100% potable water.

Simple, fast inline installation. NO special fitting requirements.

Map showing the rate of hardness in mg/l as

Calcium Carbonate in England and Wales.

Tackling mineral scale head on

The Halcyan Water Conditioners' unique catalytic alloy core creates an immediate galvanic reaction in the minerals in hard water

This stops scale build-up by altering the structure of the minerals into their non-precipitative state, and helps create softened water behaviour.

Don't just take our word for it

"Since installing the Halcyan, there has not been any premature failure of the heating elements. We now offer Halcyan as a standard option to all our customers."

John Mangan, Operations Manager, Edson Hot Water Systems

Edson Hot Water Systems supply commercial hot water systems throughout Australia, including to Coles supermarkets. When extreme hard water in coastal areas started causing a sharp increase in warranty claims on parts, they turned to Halcyan.

"The results were better than I'd hoped for. The stock showed no signs of calcium build-up or iron staining. The reps of the nursery were amazed at the quality I could produce with the quality of water I had. This unit saved me \$48.000."

Mr R. Eaton, Proprietor, Canopy Wholesale Nursery

Irrigation water quality pumped from the borehole had a very salt and iron content which meant slow, stunted plant growth and discolouration. Shortly after installing Halcyan, the water quality significantly improved, saving them money on imported water and improving plant health and growth rates.
