

Freedom

from the curse of limescale

The only water conditioner in the UK that delivers protection for over 30 years. Guaranteed.

- **No salt**
- **No chemicals**
- **No maintenance**
- **No electricity**

**Too good to be true?
Find out inside...**

Save money

When your home is free from damaging limescale, your appliances last longer and you spend less on cleaning products, toiletries and electricity bills.

Take care of your family

Conditioning your water is the perfect alternative to water softeners for those who don't want all the hassle of salt softeners and do want lovely, conditioned water protecting their home.

Keep our planet healthy

Homes with conditioned water use less energy so your CO₂ emissions go down.

And because, on average, with treated water homes can use up to 50% less cleaning products and toiletries, you're putting less chemicals back into the environment.

A simple process

You can have kinder, better behaved water for life, thanks to a water conditioner that requires:

- **No salts**
- **No chemicals**
- **No electricity**
- **No magnets**

and requires no maintenance. Ever.

The Halcyan Water Conditioner is a seriously clever piece of tech that works by changing the shape and behaviour of the mineral molecules in your water.

As it uses no chemicals, adds nothing and takes nothing away, the water conditioner is a completely natural way to treat your water.

Your water keeps all its natural essential minerals which are important for your day-to-day health, but they behave better by not bonding to your surfaces.

And, unlike some salt softeners, you won't need a separate drinking water tap, you won't have to top-up salt levels weekly, and you won't lose cupboard space either!

Installation is simple; you just replace an existing length of pipe after your stop tap on your mains water inlet with the Halcyan Water Conditioner and it will get to work instantly.

The unit doesn't take up any extra space, and it doesn't affect your water's flow rate or pressure.

Halcyan Water Conditioners have been manufactured since 1983. They are used in homes, hospitals, office buildings, farms and leisure centres, worldwide.

They cost just a few hundred pounds and last for over 30 years. Guaranteed.

Hidden benefits

Hard water contains higher than average levels of dissolved minerals, which are really healthy for you, but result in those horrible limescale deposits in kettles, boilers, central heating pipes, washing machines and dishwashers, as well as on taps.

The limescale reduces efficiency, meaning that energy is being wasted which costs you money.

A Halcyan Water Conditioner ensures that thoroughly treated water flows through your house, so that appliances:

- Last longer.
- Operate at optimum efficiency.
- Require less maintenance and repair.

There will also be less cleaning to do because the white limescale crust won't be forming on taps, sinks, basins and baths, plus household energy use will be decreased, resulting in lower bills.

Benefits of having lovely conditioned water in your home.

Protects boilers & equipment

Cleaning is easier

No residue or spotting

Kinder to sensitive skin

How does it work?

It's really simple

- 1 The Halcyan Water Conditioner is made of a special blend of 12 metals creating a unique alloy.
- 2 Inside a stainless steel housing, precisely engineered fins create turbulence as water flows through.
- 3 As the water tumbles through the unit and minerals come into repeated contact with the alloy, a powerful galvanic reaction occurs, changing the shape and structure of the mineral molecules.
- 4 As a result the minerals no longer precipitate and can't chemically bond to the surfaces around them.
- 5 It's this change in your water that prevents the calcium carbonate building up into layers of limescale.
- 6 Additionally, contact with treated water causes existing limescale to dissolve and so strips away the limescale, layer by layer, over a period of weeks and months
- 7 The minerals remain in this state for 2 to 3 weeks; plenty of time for you to use the water and remove any powder-like residue from surfaces.
- 8 Your water keeps all its beneficial minerals but they now glide over surfaces rather than sticking to them.

Easy installation

Simply replace an existing length of pipe after your stop tap, on your mains water inlet with the Halcyan water conditioner and it will get to work instantly.

The unit uses no electricity, salts or chemicals and doesn't take up any extra space. It just needs 250mm of straight pipework to slot into.

It doesn't need any special plumbing; just two standard compression fittings. It's so simple, if you're good at DIY you can do it yourself. If not, any decent plumber can fit it in around an hour.

Alternative water conditioners

Whilst salt water softeners may solve one problem, they introduce others by adding unwanted pollutants to the environment. And, British Water advise that this water is not suitable for drinking.

Other options include systems using magnets, phosphate dosing or sacrificial anodes, all of which require you to remember to do something, and have varying levels of effectiveness. Meanwhile, electric systems need access to power.

In contrast, a Halcyan Water Conditioner needs no power, is chemical free, 100% environmentally friendly, and works effectively with either hot or cold water thanks to the scientifically engineered alloy core that lasts over 30 years. Once installed it starts to work immediately.

The difference with a Halcyan Water Conditioner is that it needs no input from you and comes with a 30-year warranty.

What our customers say

“ I have been very pleased with the quick results that I have seen after fitting the Halcyan Water Conditioner in my apartment. I've found that washing the dishes is much easier, as I use hardly any detergent now and the dishes clean very easily ”

Bob P, Stoke Bishop, Bristol

“ I chose the Halcyan because it was so simple, cost effective and required no maintenance. The unit has performed very well. The chrome fittings and glass shower door only require a weekly wipe to keep them clear and shiny. Additionally, my son's eczema has almost cleared up and the water tastes better, benefits that I was not anticipating. ”

Diane M, Wallingford, Oxon

“ The kettle descaled in 4 days and the dishwasher no longer tarnishes cutlery. I don't think it will be long before other appliances which are not on mains supply will also be a “lot more healthier”. Thanks for everything. ”

John T, Braintree, Essex
